

Species distributions on a map

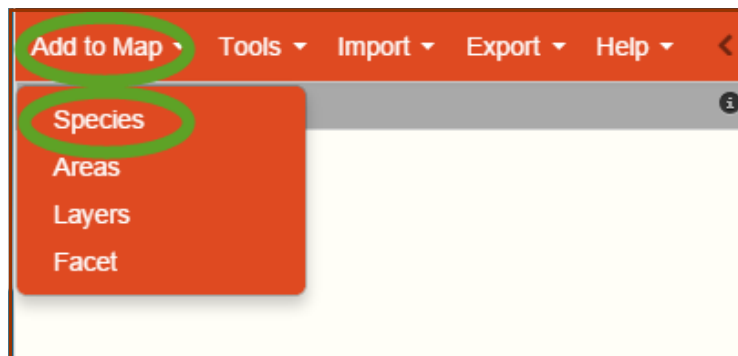

ALA Teacher Guide 2

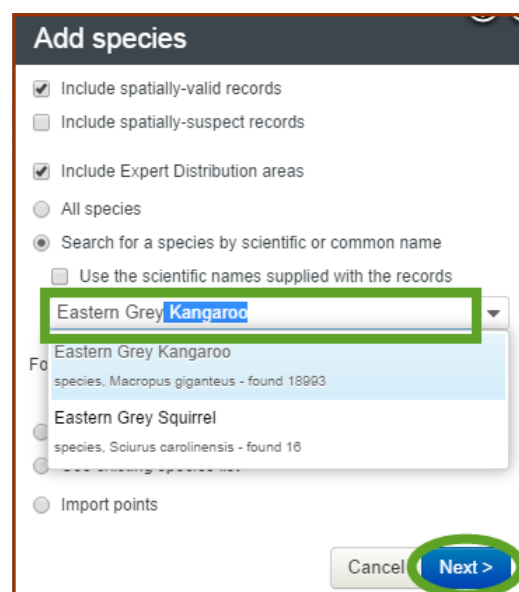

Begin at the Atlas of Living Australia homepage and select “Mapping & analysis”

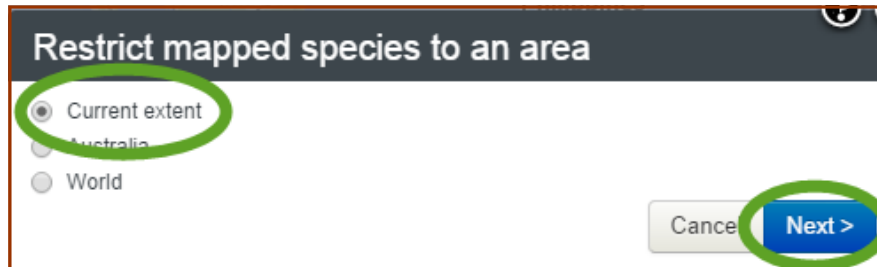

Select “Add to Map”, then “Species”.

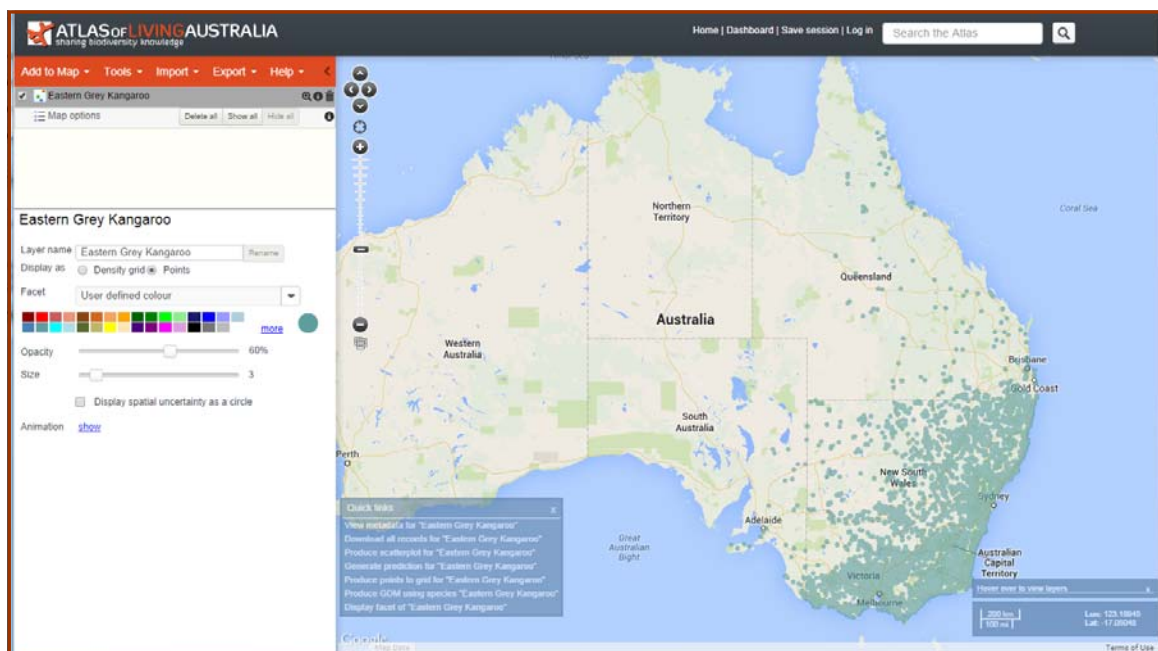

Type the species or common name, then click “Next”.

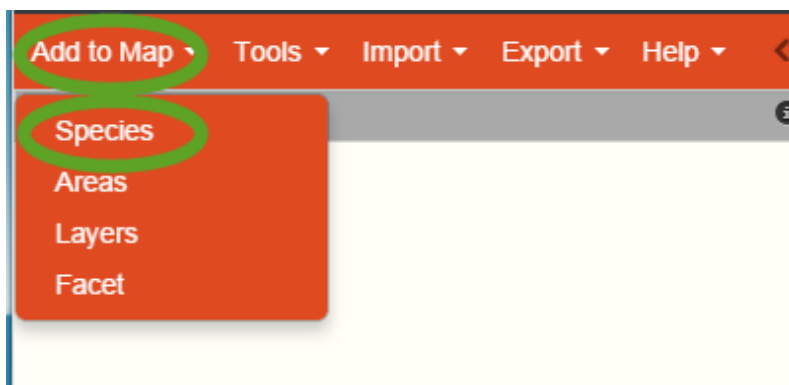

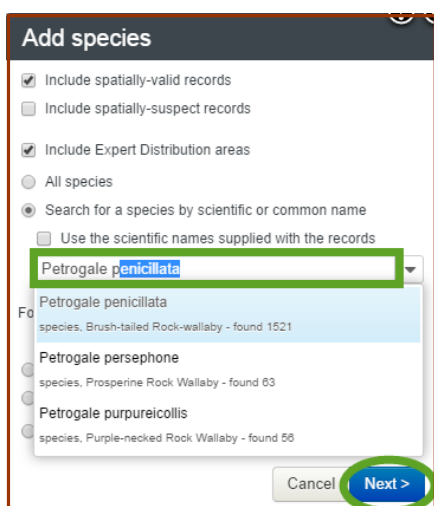

Click on “Current extent”, then select “Next”.

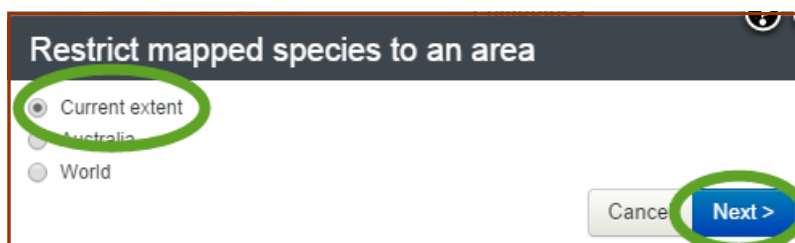

The dots on the map show occurrence records for that species. You can change the colour, size and opacity of the dots.

To add a second species to the map, select “Add to Map” then select “Species”.

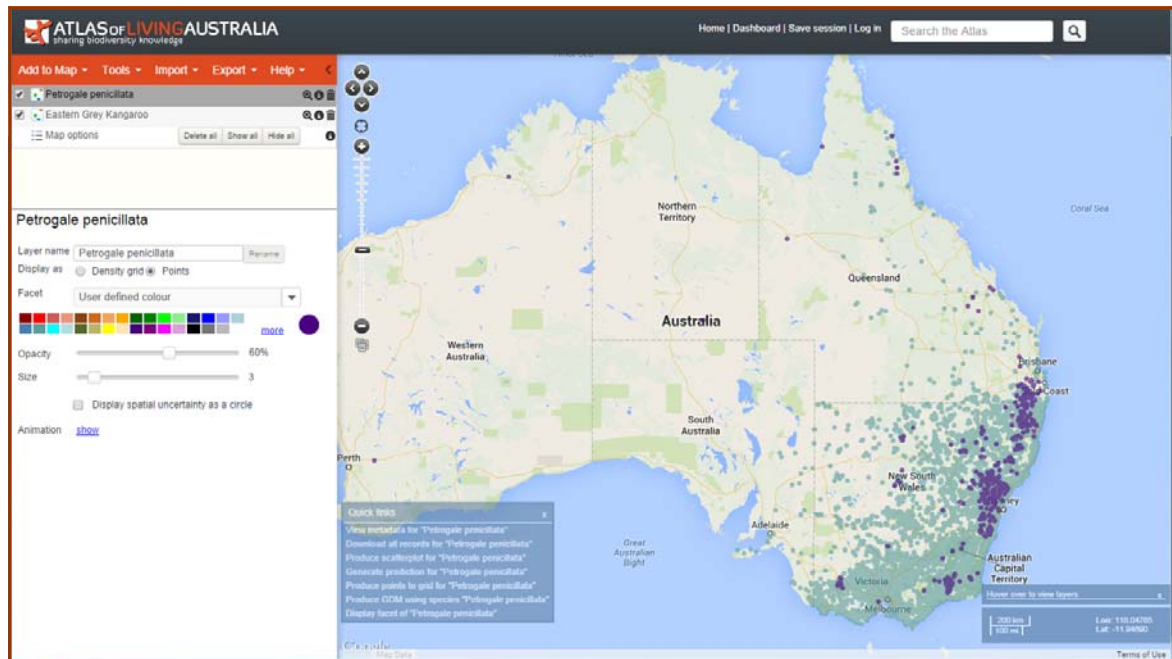

The 'Add species' dialog box is shown. It has several checkboxes for record types and a search section. In the search section, 'Petrogale penicillata' is entered in the search bar and is highlighted in the results list. The 'Next >' button is circled in green.

Type in the species name and click “Next”.

The 'Restrict mapped species to an area' dialog box is shown. The 'Current extent' radio button is selected and circled in green. The 'Next >' button is also circled in green.

Click on “Current extent”, then “Next”.

Your map will show the second species on the map in a different colour.

You can delete species from your map, or hide them by clicking on the buttons to the right and left of the species name.

You can add as many species to the map as you like.
